

## Liquid Notes gets an A-level worldwide distributor

*Re-Compose enters a major reseller agreement with Best Service, Europe's largest distributor for music software and virtual instruments.*

**Vienna, Austria - March 25, 2013** - Best Service takes over worldwide distribution of Liquid Notes, the world's first intelligent software assistant for music composers developed by Re-Compose of Vienna, Austria. The agreement will see Liquid Notes listed in major retail stores for music gear across the globe, utilizing Best Service's strong retailer network.

Liquid Notes is an **intelligent music production tool** that assists a user over the entire music production process when it comes to chords, scales and harmonic movement. It does so by making the full range of the theory of harmony available, pretty much without restriction, through an easy to use interface that translates complex harmonic structure into easily manageable building blocks:

- Changes to (complex) musical arrangements can be done in real-time, without interruption of the creative thinking process of composers,
- Performing live to a song becomes a breeze with Liquid Notes correcting any wrong notes in a melody played via MIDI keyboard or any other instrument,
- Exploring new musical ideas in genres unknown to you is now a possibility with Liquid Notes' AI-powered assistant providing suggestions and visible feedback in terms of listening habits of the Western world.

As a first success of the partnership with Best Service, Musikhaus Thomann - Germany's largest online retail store for music hard- and software - has listed Liquid Notes in their portfolio already. Listings in other major retail stores in the UK and US, such as Guitar Center, will follow in due course.

The manipulation of the overall aspects of compositions and arrangements (e.g., for accompaniments, melody creation, song form, etc.) will become a reality in **Liquid Notes 2.0**, due in the second half of 2013.

Liquid Notes is a **new, original idea**. It combines three important elements in one product:

- AI algorithms replicating human perception for harmony analysis, reharmonization, and melody creation/improvisation.
- An intuitive and simple graphical interface translating even complex harmonic structure into easily manageable building blocks.
- Educational qualities to explore harmony and melody, and to extend one's knowledge.

### About Re-Compose

Re-Compose develops methods and technologies for digital music production and an optimal experience of music, making music fully interactive. This leads to the development of intelligent tools for music composers and producers that help them get new and complex musical ideas (i.e. melodies, chords and harmony, accompaniments, etc.), deliver these ideas fast, and optimize the impact of music.
