Liquid Notes October Special. Create music, again.

Liquid Notes is now available at retailers in the US and UK. The special price offer celebrates this and makes you want to create music again, for $99.95 only!

Vienna, Austria - October 16, 2013. Re-Compose only last week released an update of Liquid Notes, the most powerful harmony & melody editing tool on the market to assist musicians, composers, DJs & producers of all styles with chords, scales and harmonic progressions. Today a special price offer for October was announced that makes Liquid Notes available at participating retailers only for $99.95. It makes you want to create music again.

Deadmau5 has recently been arguing with Afrojack what good music is, and was not shy to express his opinion on DJing. There is a sizeable gap between production and stage performance, at Re-Compose we have chosen to provide solutions for the former to assist the millions of producers in making better, more complex music. It provides them access to the full range of music from a harmonic point of view in a simple, yet sophisticated and intelligent user interface.

Artificial intelligence allows the software to read and interpret a song like a professional composer on a note level. Various musical elements and their correlations are detected by the most powerful harmonic analysis for single- and multi-track arrangements on the market, enabling the software to make complex changes to your song in real-time and thereby fully adhere to music theory and the listening habits of the Western world. A very simple layout of the user interface with two rotary knobs and one slider only is all it takes to make those changes, color indications provide directions for the conventionality of any change being made.

Liquid Notes evolves constantly and fast, with new features that make it more capable in itself and to support other solutions better being added within 1-2 months on average. Adding chords and editing harmony directly in Liquid Notes will follow as immediate next step.

Liquid Notes is a unique piece of software that fully supports the art of making music intuitive and without restrictions:

- AI algorithms replicating human perception for harmony analysis, reharmonization, and melody creation/improvisation.
- An intuitive and simple graphical user interface translating even complex harmonic structure into easily manageable building blocks.
- Enables musicians to explore more ideas, make their song sound completely different only in seconds and create better, more complex music much faster.
- Educational qualities to explore harmony and melody, and to extend one's knowledge.

About Re-Compose
Re-Compose develops pioneering methods and technologies for digital music production and an optimal experience of music. Our software makes music fully interactive, where all elements of a music composition can be recomposed or rearranged in real time through sensor or human input. This leads to the development of intelligent tools for music composers and producers that help them get new and complex musical ideas (i.e. melodies, chords and harmony, accompaniments, etc.), deliver these ideas

fast, and optimize the impact of music.
