

## Export your arrangement directly onto Live

*Free update of Liquid Notes for Live enables one-click export of files onto Live, retention of original order of clips and more for a better workflow*

**Vienna, Austria - September 4, 2014.** Re-Compose today updated Liquid Notes for Live, a Max MIDI effect for fast editing of harmony and chord progressions in Ableton Live 9. The software now comes with a set of new features aimed at optimization of the workflow: arrangements can now be exported onto Live by a drag & drop function, and the original order of clips is retained when importing from/exporting to Live.

Taken all together, this makes Liquid Notes for Live a powerful tool that gives users of Ableton Live 9 unlimited creativity, inspiration and pro-level musical skills at their fingertips:

- Identifies track type, chords, scale and scale changes, and more comprehensive information over your entire arrangement
- Drop down tab to change the chords of your song for all tracks of an arrangement in an instant, as well as being able to hear the change in real time
- Slider function to change the cadence of the chords
- Ability to change the tensions of your chords
- Plug and play with Ableton Live 9 (via Max for Live)
- Piano roll and full instrumentation presented in easy to see color dynamic, that lists all the instruments of your piece
- Play live flawlessly with Liquid Notes for Live. Play a wrong note and Liquid Notes for Live will correct it to the closest alternative
- Compatible with both Windows and Mac OS X

Liquid Notes for Live is available for €79/\$89 at [www.re-compose.com](http://www.re-compose.com). A 20-day free trial is included in the full version of the software.

### About Re-Compose

Re-Compose develops pioneering methods and technologies for digital music production and an optimal experience of music. Our software makes music fully interactive, where all elements of a music composition can be recomposed or rearranged in real time through sensor or human input. This leads to the development of intelligent tools for music composers and producers that help them get new and complex musical ideas (i.e. melodies, chords and harmony, accompaniments, etc.), deliver these ideas fast, and optimize the impact of music.
